

Gluster Dashboard Experiment

Aravinda VK
@aravindavk

Gluster Meetup, Bengaluru, India - 25th Sep, 2019

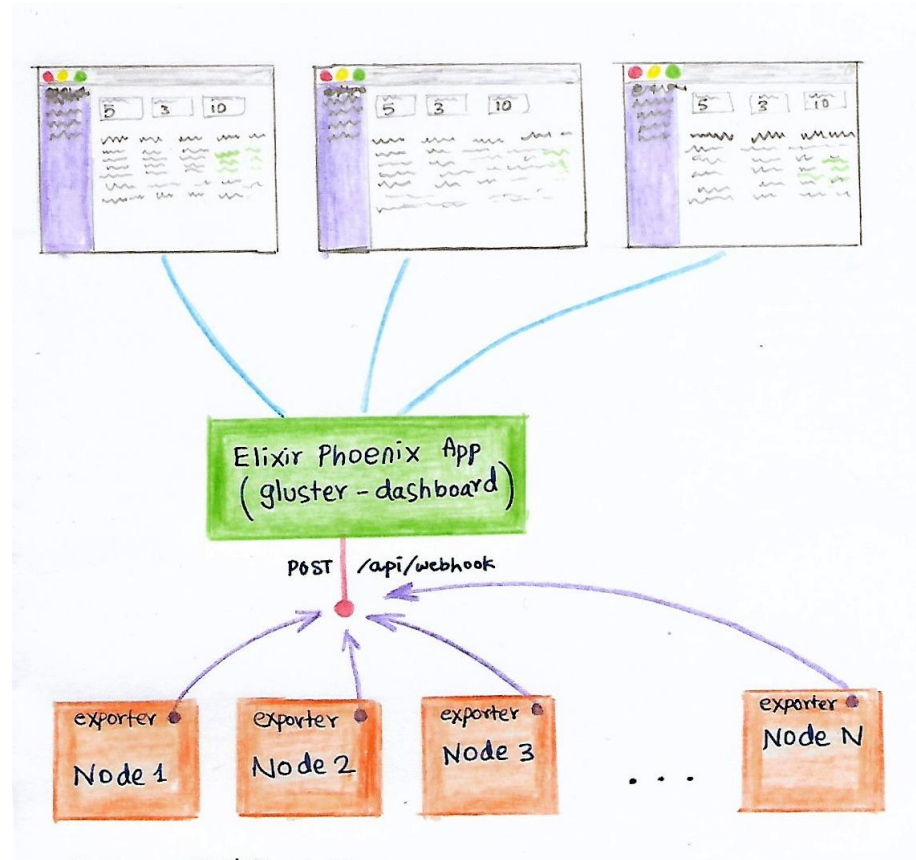

Introduction

- Elixir is a programming language which compiles to Erlang VM(BEAM)
- Phoenix is a Web framework written in Elixir
- Phoenix Liveview is a new feature to develop real-time applications without writing JavaScript
- Gluster dashboard is a project created to explore Phoenix LiveView project
- Initially designed for <https://phoenixphrenzy.com> contest

“ Phoenix Phrenzy is a contest for developers to build with Phoenix LiveView, show off their software engineering skills, and help demonstrate the capabilities of this great technology to the open source community.

Architecture

- Exporter is written in D programming language(<https://dlang.org>)
- Running exporter in all nodes is optional, can be run in a few nodes for better availability

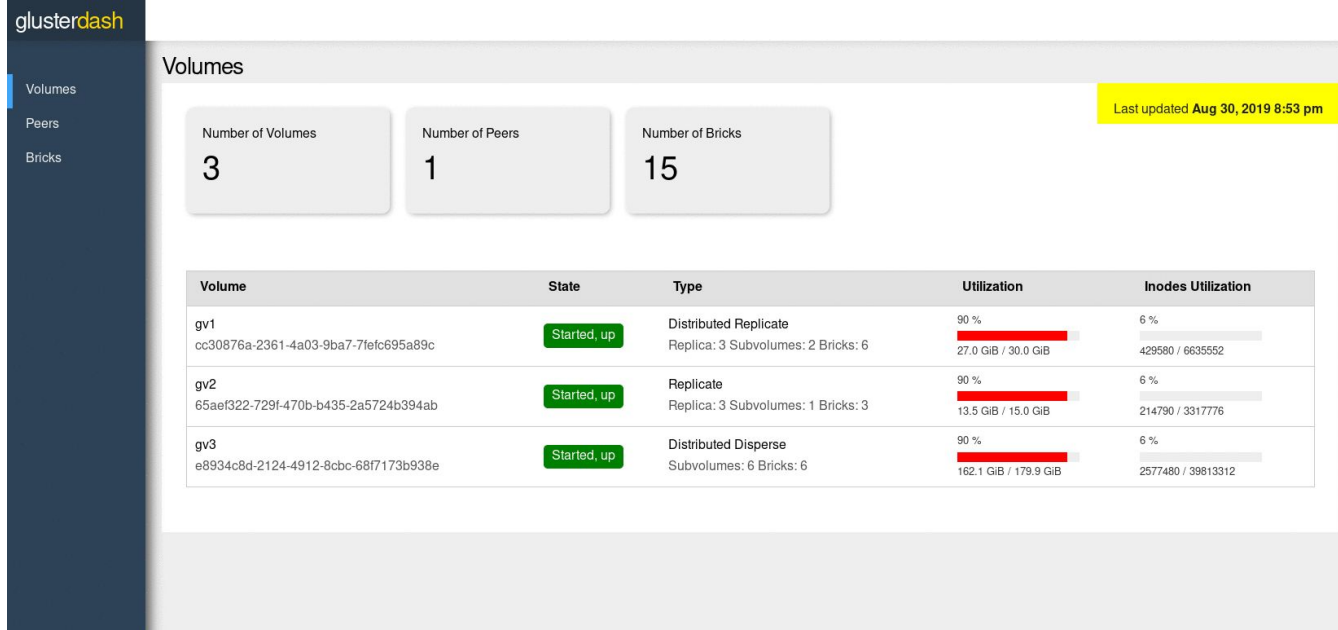

Demo

Open URL: <http://bit.ly/gdash-demo>

Current Status

- Not yet production ready
- Authentication is yet to be implemented
- A few more bug fixes pending to make this stable
- Dashboard is not yet mobile friendly
- Request for new features or report issues here:
<https://github.com/aravindavk/gluster-dashboard/issues>
